

YOUTRACK

& Space

Nenad Tripić - Ненад Трипић

What is it?

- project management tool
- track tasks, bugs
- plan sprints, releases
- monitoring tool

Agile Board

[Issues](#)[Dashboards](#)[Agile Boards](#)[Reports](#)[Projects](#)

Create an Agile Board

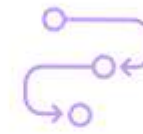

Scrum board

Plan and deliver incremental improvements in a series of sprints.

Kanban board

Visualize a workflow based on supply and demand that limits the work in progress for each team.

Version-based board

Assign issues to sprints automatically by linking sprints to the set of values in a custom field.

Custom board

Build a board from scratch to support a hybrid agile approach.

Personal board

Manage all of the issues that are assigned to you.

Scrum vs. Kanban Board

Scrum

- create plan before start of project
- creating sprints
- estimate story points
- backlog
- plan mode
- active sprint mode
- column based
- more details

Kanban

- start work without necessarily having a plan
- without sprints
- column based
- deals with all issues rather than portion
- without user stories
- time estimates
- more simple

YouTrack + VCS

GitLab

GitHub Integration

Follow the instructions on this page to integrate with VCS repositories that are hosted on github.com  or a self-hosted GitHub Enterprise installation.

A GitHub integration enables the following features in YouTrack:

- Apply commands to YouTrack issues right from a commit comment or a pull request description. For more information, see [Apply Commands in VCS Commits](#).
- Track commits that are related to specific issues in the activity stream for the issue in YouTrack. For more information, see [View and Edit VCS Changes](#).
- Add links to YouTrack issues in commit messages. For more information, see [Link Issues in VCS Commits](#).
- Add links to the GitHub repository by pasting commit hashes into the issue summary, description, comment, or a supplemental text field.
